

AddressPro on AWS ensures accuracy and completeness of address data and improves communication with all stakeholders.

Internal systems working with clean data reduces the need to cleanse addresses later in the process – providing a more efficient environment

Address issues can be resolved at the time of entry – ensuring addresses will be accurate

Ensures timely customer communications due to accurate address information

Integrates into departmental, web, or enterprise applications through a secure AWS connection

Easy integration with commercial off-the-shelf third-part applications

The image shows two overlapping screenshots of the AddressPro software interface. The top screenshot displays the 'Input Information' section with fields for Line 1 through Line 9 and a 'Look up' button. The bottom screenshot shows the 'Output Information' section with fields for Address1, Address4, State, Company1, Company4, Name2, and URBDat. It also includes a 'Look up' button and a 'Clear' button. The bottom screenshot also shows a 'Standard' and 'International' toggle at the bottom.

AddressPro Features:

- Performs standard USPS address verification and correction
- Data collected can be seamlessly verified and cleansed via the Amazon Cloud.
- SOAP/XML implementation for easy setup and integration
- Optional add-on modules such as USPS® DPV®, LACS^{Link}®, and Suite^{Link}® improve bottom line performance and provide valuable information
- Supports multiple users and/or systems simultaneously.
- Provides geocoding information
- Configurable logs that can help troubleshoot issues
