

AddressPro ensures the accuracy and completeness of address data and improves deliverability.

As online shopping continues to increase, more and more ecommerce retailers are seeking to improve the time it takes to deliver a product while decreasing the cost of delivering the product. Hurried shoppers squeeze in shopping time at work, between chores, going to the gym, and many other activities. As a result, the “ship to” address is sometimes entered incorrectly in online order forms. Simple typos and missing information can lead to major delays, increased costs, and failed deliveries. Address correction surcharges can be from \$13 to over \$70 per correction.

Anchor software's AddressPro Parcel solution offers real-time address correction as addresses are being entered to ensure that the information corrected upon entry. Address information is corrected against USPS address data to validate and confirm the delivery address, suite information, rural street name conversion, and even apartment information. In addition, this solution will also provides a Residential Delivery Indicator (RDI) so that you can calculate accurate prices based on this information.

Features:

- Residential Indicator (RDI)
- Delivery Point Validation (DPV)
- Business Suite Validation (Suite^{Link})
- Locatable Address Conversion System (LACS^{Link})
- Apartment Append

Options

- Geocoding
- Deceased Suppression
- Prison Suppression
- Address Enhancement Processing (AEP)
