

DUPLICATE CHECK WITH IDENTITY FOR SAP S/4HANA®

MANY CAN SEARCH. ONLY A FEW CAN IDENTIFY.

Duplicates are data records that exist two or more times in your SAP system. Some result from typing or listening errors, while others can be caused by a lack of attention to detail when entering data into your system. Sometimes duplicates can be very similar or even identical, but there are times when the differences between two records are so great it takes special care to resolve them. Regardless of how similar they are or how they originated, they all have one thing in common: they dilute the quality of your customer data.

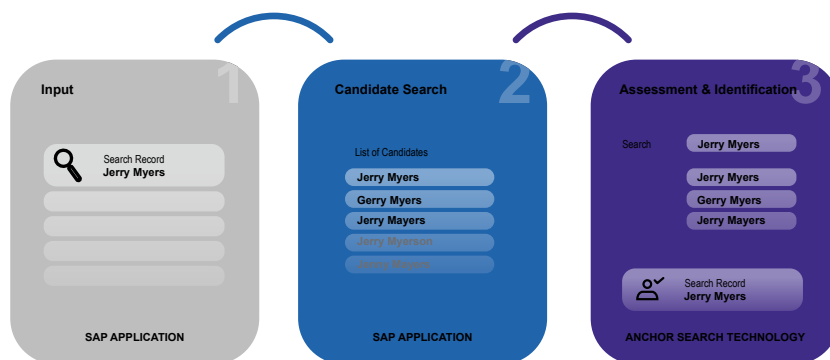

The switch to SAP S/4HANA is more than just a change to a new system. It's a switch that can have a huge impact on your entire business model. As your business moves to S/4HANA, processes are becoming optimized by becoming more digitized, and in order for the conversion to digital and subsequent processes to function well, the data behind them must be correct. The switch to SAP S/4HANA is an ideal time to take care of any data quality issues that may exist in your current system.

Are you already using SAP HANA and now want to ensure good data quality in your new SAP system easily, quickly and efficiently? All this is possible with our Duplicate Identity Check for SAP S/4HANA. With our solution you can ensure permanently clean data in your SAP S/4HANA environment. Integrated directly into your system, Anchor Identity for SAP S/4HANA performs the duplicate check in SAP and keeps your system clean and up-to-date.

HOW DOES THE IDENTIFICATION OF DUPLICATES WORK WITH IDENTITY FOR SAP S/4HANA?

Our solution for identifying duplicates, which was specifically developed for SAP HANA, combines the high-performance fuzzy search in SAP HANA with Anchor's many years of experience in identifying duplicate records. And this is how it works:

Identity for SAP S/4HANA uses search function in SAP HANA to generate a candidate list of possible duplicates. Next, the Anchor technology for duplicate identification "chooses" the relevant, unique candidates. In this process, we use our proven and proprietary technologies, evaluation methods and knowledge-bases of the Identity library. The user receives the identified duplicates as output in the SAP system, including ranking, scoring and detailed match evaluation.

YOUR ADVANTAGES

- Complete integration with your SAP system.
- High-performance fuzzy search in SAP HANA serves as the foundation.
- Identification of the final matches by means of proven Anchor technologies.
- Evaluation of the matches by means of ranking and scoring.
- Address type-independent evaluation of individuals.
- Adaptation to your needs by customizing the configuration.
